PROFESSIONAL SUMMARY

Actuarial Science graduate with a strong quantitative grounding in data cleansing, statistical analysis, and predictive modeling using Python and SQL. Experienced in conducting structured data validation, wrangling complex datasets, and generating actionable business insights through interactive visualizations in Tableau and Power BI. Possesses a solid understanding of life insurance principles and IFRS 17 reporting guidelines. Proven track record in leveraging machine learning and AI for database integrations and product development. Currently pursuing CM2 (Financial Engineering & Loss Reserving) to further specialize in actuarial analytics, quantitative risk analysis, and AI-driven financial modeling.

CORE SKILLS

- **Actuarial & Quantitative Competencies:** Loss Reserving & Financial Engineering (CM2 in progress), Risk Modeling, Stochastic Simulation, Statistical Regression, Predictive Modeling, Insurance Claims Analysis, Financial Risk Management, Investment & Credit Risk Fundamentals.
- **Technical Skills & Languages:** Python (Pandas, NumPy, Scikit-Learn, Matplotlib), SQL (MS SQL Server, T-SQL, PostgreSQL), Database Management, Advanced Excel (Financial Modeling & Data Analysis).
- **Machine Learning & Data Visualization:** Tableau, Power BI, Linear & Logistic Regression, Decision Trees, Random Forest Classifiers, Artificial Intelligence, RESTful APIs (Django, FastAPI).

PROFESSIONAL EXPERIENCE

Datum Analytics — Nairobi, Kenya

Data Analyst | 2025

- Conducted structured data validation and rigorous statistical analysis on large-scale operational datasets to ensure overall data integrity.
- Engineered and optimized relational database queries to clean, aggregate, and transform raw data into structured formats for downstream analysis.
- Generated interactive dashboards and analytical reports to track key performance indicators and support data-driven executive decisions.

CUEA Innovation Hub — Nairobi, Kenya

Product Development Engineer / Backend Developer | 2024

- Architected and built robust RESTful APIs using the Django framework and PostgreSQL, leveraging Aiven and Postman for comprehensive integration testing.
- Designed, built, and validated structured internal databases to optimize data flow and system reliability across organization-wide platforms.

- Applied advanced machine learning techniques with Scikit-Learn to improve system accuracy, automate workflows, and enhance predictive reliability.

SELECTED QUANTITATIVE PROJECTS

Insurance Claims Reserving Model

- Developed a regression-based claims reserving model in Python using Pandas and Scikit-Learn to project long-tail liabilities.
- Evaluated statistical model performance using RMSE and R^2 metrics to ensure robust actuarial projections.

Portfolio Risk Dashboard

- Designed and deployed an interactive Tableau dashboard to visualize complex financial risk exposures and volatility indicators for stakeholders.
- Utilized SQL to wrangle, filter, and aggregate historical financial datasets, reducing data preprocessing time.

Health Risk Prediction Model & Web Application

- Built an end-to-end multi-page web application using Streamlit and FastAPI to predict health metrics using the Pima Indians Diabetes Dataset.
- Implemented and tuned a Random Forest Classifier using Scikit-Learn to optimize classification accuracy and model reliability.

EDUCATION & CREDENTIALS

The Catholic University of Eastern Africa (CUEA)

BSc in Actuarial Science (Honours) | Graduated: 2025

IFoA (Institute and Faculty of Actuaries)

Professional Certification: CM2 (Financial Engineering & Loss Reserving) | In Progress

GoMyCode

Professional Certification in Data Science | 2026

Kanunga High School

Kenya Certificate of Secondary Education (KCSE)
